## ~/Mission .....

**You:** Built a fantastic team. They are driven and capable of greatness, you know this, but they need a guide

**Me:** The proven engineering leader you have been looking for, let's make this happen!

## ~/Technologies .....

› Ruby, JavaScript, TypeScript, Ruby on Rails, Node.js, Sidekiq, React, GraphQL, Redis, Docker, Postgres, SQLite

› MySQL, ElasticSearch, Golang, New Relic, Sentry, Rollbar, GitHub Actions, Heroku, AWS, Salesforce

## ~/CMD ..... CirrusMD | Senior Software Engineer | April 2021 - Present

› Expand and lead the Enterprise and Integrations engineering teams from 1 to 4 engineers

› Build relationships with product, design, and key stakeholders to expand the platform instead of manufacturing one-offs

› Provide mentorship and guidance to teammates both on and off my team, through code reviews pairing and 1:1 sessions

› Allow zero-trust access to our REST API through a mutual TLS proxy

› Expand benefits verification system to support wide a array of customer configurations

› Model asynchronous data sync systems between our EHR and our customer's EHR systems through HIEs

## ~/Groove ..... Groove | Senior Software Engineer | August 2019 - January 2021

› Expanded and lead the Microsoft Office integration engineering team from 1 to 4 engineers

› Engaged with product, design, and key stakeholders to rebuild a Microsoft Office version of the GSuite offering

› Provided mentorship and guidance to teammates both on and off my team, through code reviews pairing and 1:1 sessions

› Architected and delivered a configurable asynchronous Microsoft Outlook calendar sync with Salesforce context integration

› Established Microsoft Add-In foundation considering development experience, releases, product support, and usage metrics

## ~/SGG ..... Smash.gg | Software Engineer | April 2018 - July 2019

› Worked closely with product and design to deliver thoroughly thought-out and vetted product and technical specifications

› Provided mentorship and guidance to teammates both on and off my team, through code reviews pairing and 1:1 sessions

› Delivered a full-stack, no-compromises internationalization solution opening the platform to a massive audience

› Designed and implement proprietary system-level entity change tooling to enable decoupled callback based workflows

## ~/Groove ..... Groove | Software Engineer | April 2016 - April 2018

› Collaborated closely with product, design, and sales teams to derive business requirements and create implementation plans

› Built processes and a positive team culture as a founding team member, both in and out of engineering

› Architected, delivered, and maintained a fully integrated softphone dialer integration through our Chrome extension

## ~/NEWR ..... New Relic | Software Engineer | July 2014 - February 2016

› Collaborated closely with finance, sales, marketing and engineering teams to deliver and maintain business integrations

› Architected and implemented a data ingest API to collect and merge sales and product data to inform business decisions

## ~/BoSo ..... Bountysource | Software Engineer | February 2012 - July 2014

› As the first hire of the company, set forth the legacy all the way from `rails new bountysource`

› Designed and implemented platform-agnostic issue aggregator, the core functionality behind the bug bounty program

## ~/Badger ..... Badger | Software Engineer | March 2011 - February 2012

› As the first hire of the company, set forth the legacy all the way from `rails new badger`

› Designed and implemented client libraries for domain registrar interaction and browser automated domain transfers

## ~/etc ..... Other Achievements

› Midishare: A WebRTC based P2P MIDI streaming app. Built it all myself › Eagle Scout › (very) amateur music producer

› Read the Rust book for fun › Never broken a bone › 2014 Hackathon winner (as tech lead) › Parent of three (3!!) cats
